For this session, we consider the following spatial relational diagram of the GeoNorthwind database.

Exercise 1. Give the total sales in 1997 to customers located in cities that are within an area whose extent is a polygon drawn by the user. For the purpose of the exercise, we will consider the following coordinates for the polygon's opposite corners: (5, 40) and (100, 90).

Exercise 2. What are total sales to customers located in a state that contains the capital city of the country?

Exercise 3. Give the spatial union of the states in the USA where at least one customer placed an order in 1997.

Exercise 4. What is the distance between the customers' locations and the capital of the state in which they are located?

Exercise 5. For each customer, give the total sales amount to its closest supplier.

Exercise 6. Give the total sales amount for customers that have orders delivered by suppliers such that their locations are less than 200 km from each other.

Exercise 7. What is the distance between the customer and supplier for customers that have orders delivered by suppliers of the same country.

Exercise 8. Give the number of customers for European countries with an area larger than 50,000 km².

Exercise 9. For each supplier, give the number of customers located at more than 100 km from the supplier.

Exercise 10. For each supplier, give the distance between its location and the centroid of the locations of all its customers.
Solution to Exercise 1

```sql
SELECT C.CompanyName AS Customer,
       Y.CityName AS City,
       SUM(S.SalesAmount) AS TotalSales
FROM Sales S,
     Customer C,
     City Y,
     Time T
WHERE S.CustomerKey = C.CustomerKey
  AND C.CityKey = Y.CityKey
  AND S.OrderDateKey = T.TimeKey
  AND T.Year = '1997'
  AND ST_Within(Y.CityGeo, 'SRID=4326;POLYGON((5.0 40.0, 100 40.0, 100.0 90.0, 5.0 90.0, 5.0 40.0))'::geometry)
GROUP BY C.CompanyName, Y.CityName
```

Beware that you have to specify the SRID of the polygon and to "cast" the Geography-typed result to a Geometry type (with the `::geometry` statement) because the function `ST_Within` only accepts geometry.

To check your results, you could add the following column to the query: `ST_AsText(Y.CityGeo) AS City`.

Note that you could also use the `ST_GeographyFromText` function to interpret the polygon string into a geography, but you still would have to cast it into a geometry type. Practically, you could replace

'`SRID=4326;POLYGON((5.0 40.0, 100 40.0, 100.0 90.0, 5.0 90.0, 5.0 40.0))'::geometry'

by

`ST_GeomFromText('SRID=4326;POLYGON((5.0 40.0, 100 40.0, 100.0 90.0, 5.0 90.0, 5.0 40.0))')`

Solution to Exercise 2

```sql
SELECT C.CompanyName AS Customer,
       SUM(S.SalesAmount) AS TotalSales
FROM Sales S,
     Customer C,
     City Y,
     State A,
     Country O
WHERE S.CustomerKey = C.CustomerKey
  AND C.CityKey = Y.CityKey
  AND Y.StateKey = A.StateKey
  AND A.CountryKey = O.CountryKey
  AND ST_Contains(A.StateGeo,O.CapitalGeo)
GROUP BY C.CompanyName
```

Note that, like for the previous exercise, you could also use the `ST_Within` function (and swap the parameters).
Solution to Exercise 3

```sql
SELECT ST_AsText(ST_Union(DISTINCT A.StateGeo)) AS States
FROM Sales S,
Customer C,
City Y,
State A,
Country O,
Time T
WHERE S.CustomerKey = C.CustomerKey
AND C.CityKey = Y.CityKey
AND Y.StateKey = A.StateKey
AND A.CountryKey = O.CountryKey
AND O.CountryName = 'United States'
AND S.OrderDateKey = T.TimeKey
AND T.Year = '1997'
```

Solution to Exercise 4

```sql
SELECT C.CompanyName AS Customer,
       ST_Distance(C.CustomerGeo, A.CapitalGeo) AS Distance
FROM Customer C,
     City Y,
     State A
WHERE C.CityKey = Y.CityKey
     AND Y.StateKey = A.StateKey
ORDER BY C.CompanyName
```

Solution to Exercise 5

```sql
SELECT C.CompanyName AS Customer,
       SUM(S.SalesAmount) AS TotalSales
FROM Sales S,
     Customer C,
     Supplier U
WHERE S.CustomerKey = C.CustomerKey
     AND S.SupplierKey = U.SupplierKey
     AND ST_Distance(C.CustomerGeo, U.SupplierGeo) <= (SELECT MIN(ST_Distance(C.CustomerGeo, U1.SupplierGeo))
     FROM Sales S1,
             Supplier U1
     WHERE S1.CustomerKey = C.CustomerKey
         AND S1.SupplierKey = U1.SupplierKey)
GROUP BY C.CompanyName
```

Note that this query is assuming that we cannot have two closest suppliers for any customer. Should we want to take this case into account, then the query could be extended as follows:

```sql
SELECT C.CompanyName AS Customer,
       U.CompanyName AS Supplier,
       SUM(S.SalesAmount) AS TotalSales
FROM Sales S,
     Customer C,
     Supplier U
WHERE S.CustomerKey = C.CustomerKey
     AND S.SupplierKey = U.SupplierKey
     AND ST_Distance(C.CustomerGeo, U.SupplierGeo) <= (SELECT MIN(ST_Distance(C.CustomerGeo, U1.SupplierGeo))
```

3
FROM Sales S1,
    Supplier U1
WHERE S1.CustomerKey = C.CustomerKey
    AND S1.SupplierKey = U1.SupplierKey
GROUP BY C.CompanyName, U.CompanyName

Solution to Exercise 6

SELECT C.CompanyName AS Customer,
       SUM(S.SalesAmount) AS TotalSales
FROM Sales S,
    Customer C,
    Supplier U
WHERE S.CustomerKey = C.CustomerKey
    AND S.SupplierKey = U.SupplierKey
    AND ST_Distance(C.CustomerGeo, U.SupplierGeo) < 200
GROUP BY C.CompanyName

Solution to Exercise 7

SELECT DISTINCT C.CompanyName AS Customer,
              U.CompanyName AS Supplier,
              ST_Distance(C.CustomerGeo, U.SupplierGeo) AS Distance
FROM Sales S,
    Customer C,
    City Y,
    State A,
    Supplier U,
    City AS SY,
    State AS SA
WHERE S.CustomerKey = C.CustomerKey
    AND C.CityKey = Y.CityKey
    AND Y.StateKey = A.StateKey
    AND S.SupplierKey = U.SupplierKey
    AND U.CityKey = SY.CityKey
    AND SY.StateKey = SA.StateKey
    AND SA.CountryKey = A.CountryKey
ORDER BY C.CompanyName, U.CompanyName

Solution to Exercise 8

SELECT O.CountryName AS Country,
       COUNT(DISTINCT S.CustomerKey) AS NbCustomers
FROM Sales S,
    Customer C,
    City Y,
    State A,
    Country O,
    Area R
WHERE S.CustomerKey = C.CustomerKey
    AND C.CityKey = Y.CityKey
    AND Y.StateKey = A.StateKey
    AND A.CountryKey = O.CountryKey
    AND ST_Area(O.CountryGeo) > 5
    AND O.AreaKey = R.AreaKey
AND TRIM(R.AreaName) = 'Europe'
GROUP BY O.CountryName

Solution to Exercise 9

SELECT U.CompanyName AS Supplier,
       COUNT(DISTINCT C.CustomerKey) AS CustomerCount
FROM Sales S,
     Supplier U,
     Customer C
WHERE S.SupplierKey = U.SupplierKey
    AND S.CustomerKey = C.CustomerKey
    AND ST_Distance(U.SupplierGeo, C.CustomerGeo) > 100
GROUP BY U.CompanyName

Solution to Exercise 10

SELECT U.CompanyName AS Supplier,
       ST_Distance(U.SupplierGeo, ST_Centroid(ST_Union(DISTINCT C.CustomerGeo))) AS Distance
FROM Sales S,
     Supplier U,
     Customer C
WHERE S.SupplierKey = U.SupplierKey
    AND S.CustomerKey = C.CustomerKey
GROUP BY U.CompanyName,
         U.SupplierGeo
