

BI to the Masses

End-User BI from a Project Management Perspective

Presented by

Dr. Morten Middelfart, TARGIT CTO

Morten Middelfart – Work Background

- 1997–present, CTO of TARGIT A/S, Business Intelligence software company, Denmark
- 1996–1997, Founder and CEO of Morton Systems ApS, a startup BI software company
- 1992–1996, BI Project Manager at A.P. Moller/Maersk, Denmark and New Jersey, USA
- 1990–1992, Platoon Leader, Danish Army, Motorized Combat Infantry
- 1985–1989, Programmer at Sandlykke & Leifsgaard, Denmark

See targit.com/research for more info.

Morten Middelfart – Educational Background

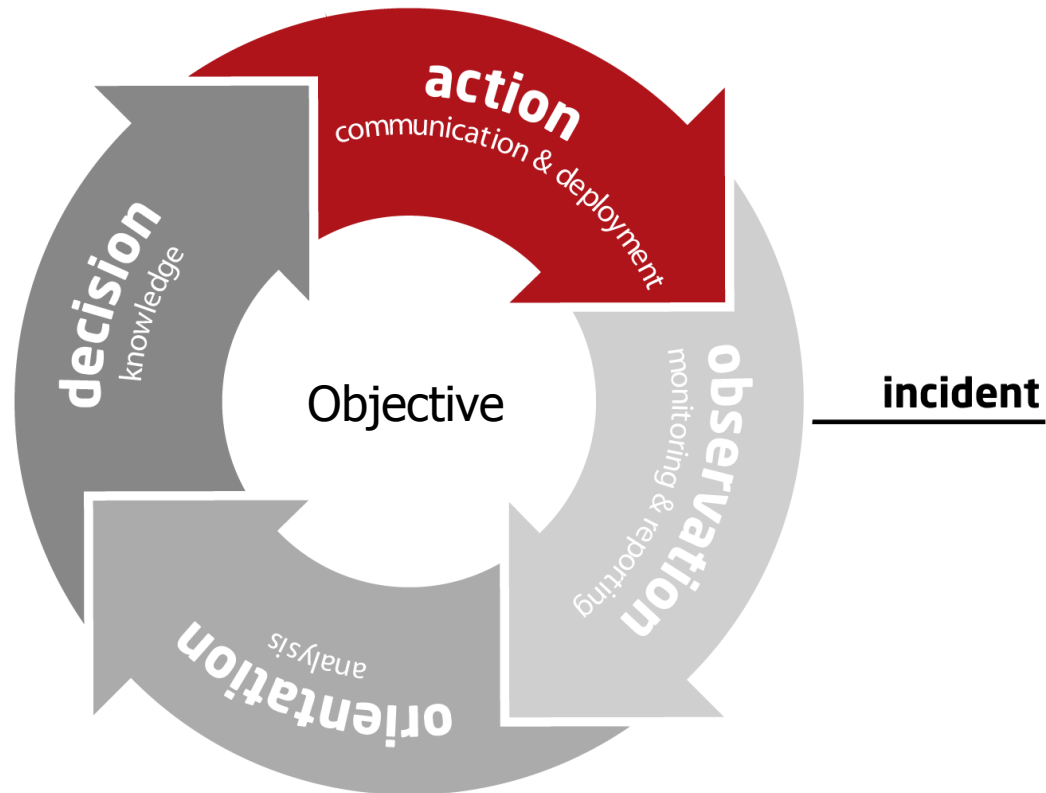

- Ph.D. in Computer Science, Aalborg University, Denmark, December 2010
- Ph.D. in Computer Aided Leadership & Management, Rushmore University, USA, August 2004
- MBA from Henley Management College, UK, February 2002
- MISE at A.P. Moller, Denmark, August 1992
- Army School of Combat, Denmark, December 1990

See targit.com/research for more info.

Meeting Big Data challenges in Leadership with Human-Computer Synergy.

Presented by
Dr. Morten Middelfart, CTO

Big Data

Data that exists in such large amounts or in such unstructured form that it is difficult to handle in the traditional data warehouse or any other type of database.

Right?

From Control to No Control

From Control to No Control

- Business Intelligence (BI)
Reporting, OLAP, and data mining
on data that are under our control.
- “Analytics” starts where BI ends
Typically data will not be under our control.

From How
to Who

But also
Why

From Control to No Control

- No control over availability
- No control over quality
- Tipping point for me was 2012
Twenty years of BI, I found myself doing more Analytics of data I did not control...

From Control to No Control

Do you Fear Change?

What is Fear?

What is Fear?

<http://www.ted.com> Kevin Slavin argues that we're living in a world shaped by algorithms.

It's a War

- Algorithms are already influencing (defining) structured data
- Scoring – the one number analysis
Credit Score, Klout -> Profiling
- Algorithms are moving into unstructured, uncontrolled data too...

Search for Sentinels

Search your data to discover Sentinels that can give you early warnings

Sales cube - Revenue

Period - Month

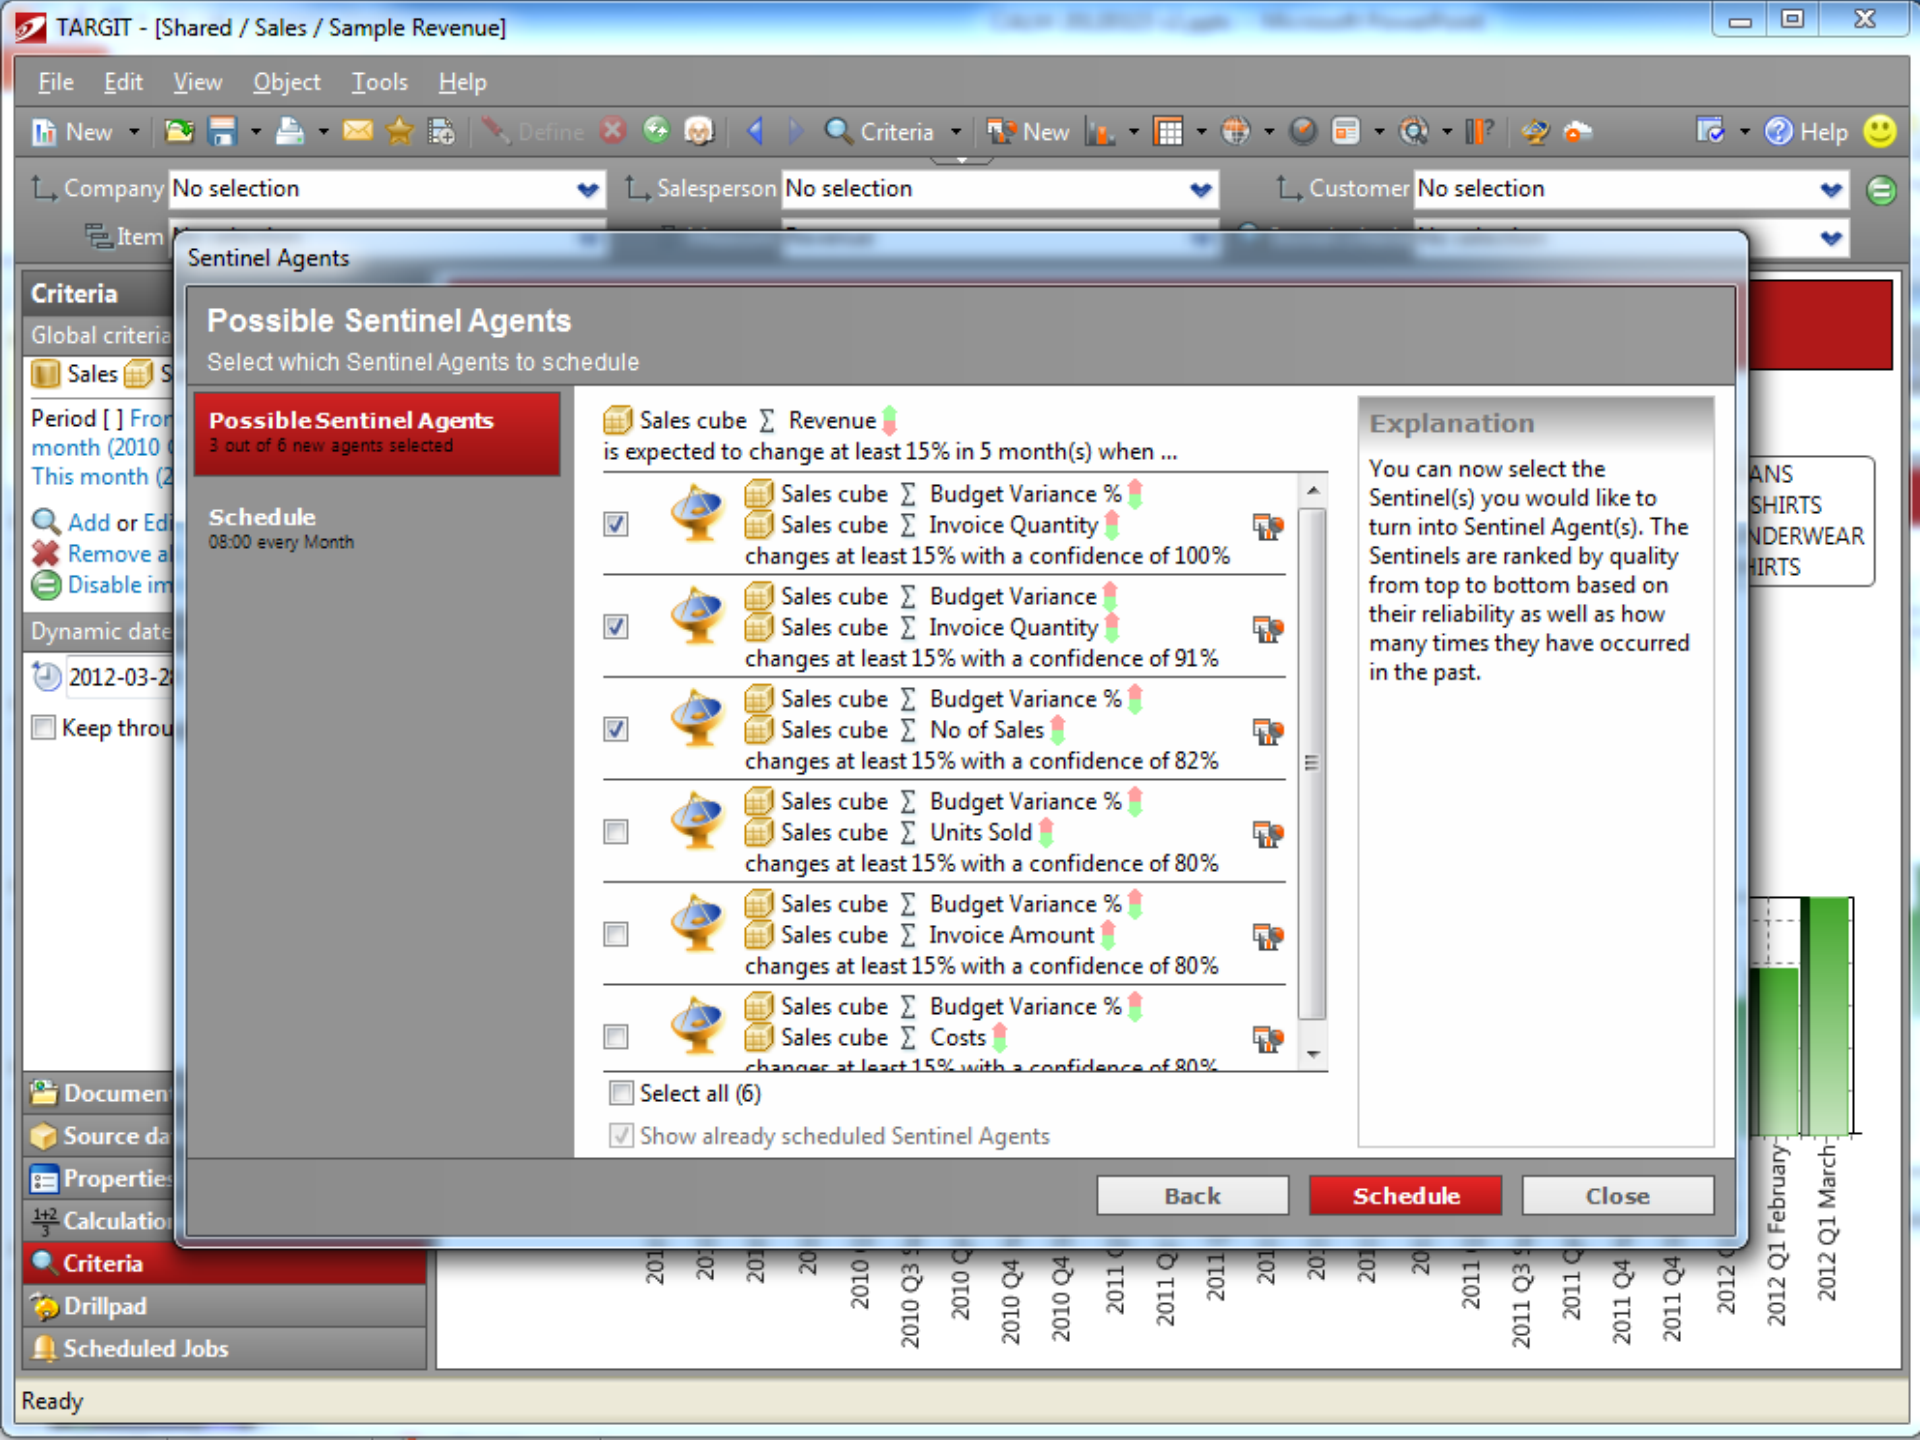

Sales cube

No criteria specified

Sentinels are prediction based rules that will allow you to get an early warning. With Sentinels you can expand the horizon for your notification agents and can therefore react faster if the environment around your organization changes.

Alternatively, you can limit the scope by modifying the  **Criteria** or the number of  **source cubes** for the search.

Cancel

Human-Computer Synergy

Sentinel Example

Revenue is expected to decrease at least 10% in 3 month(s) because:

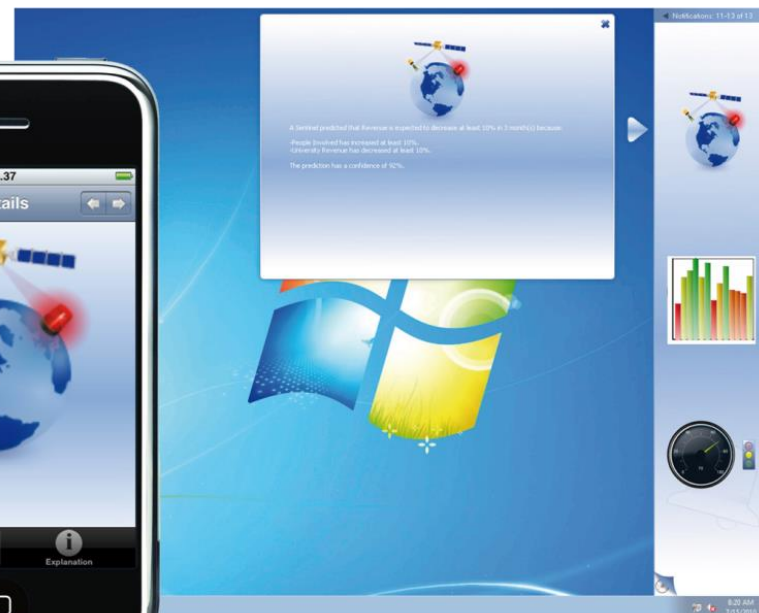

- People Involved has increased at least 10%.
- University Revenue has decreased at least 10%.

The prediction has a confidence of 92%.

Eli Pariser: Beware online "filter bubbles"

FILMED MAR 2011 • POSTED MAY 2011 • TED2011

1,964,648 Views

As web companies strive to tailor content to our tastes (including news and search results), there's a dangerous uniformity. We get trapped in a "filter bubble" of information that could challenge our worldview. Eli Pariser argues that this is ultimately prove to be bad for us.

Pioneering online organizer Eli Pariser's talk "The Filter Bubble," about how algorithms might be narrowing our worldview.
